

Extravehicular Mobility Unit (EMU)

The EMU is the most advanced spacesuit ever developed. It is designed to provide astronauts with the ability to perform tasks outside the spacecraft. The suit is made of a lightweight, flexible material that allows for a wide range of movement. It also provides protection from the harsh environment of space, including extreme temperatures and radiation. The EMU is a complex piece of equipment that has been used by astronauts on numerous spacewalks.

EMU

The EMU is a complex piece of equipment that has been used by astronauts on numerous spacewalks. It is designed to provide astronauts with the ability to perform tasks outside the spacecraft. The suit is made of a lightweight, flexible material that allows for a wide range of movement. It also provides protection from the harsh environment of space, including extreme temperatures and radiation.
